- Remarks : Direct contact with the product must be avoided by organizational measures.  
The glove material has to be impermeable and resistant to the product/the substance/the preparation.  
The exact break through time can be obtained from the protective glove producer and this has to be observed.  
The gloves need to be disposed after the penetration time and replaced by new ones.  
Apply skin protectant before working with gloves to avoid skin swellings and use a skin cleansing and skincare product after the work.  
**For the permanent contact gloves made of the following materials are suitable:**  
If longer exposure to the chemical preparation is necessary, a sturdy overglove against mechanical strain is recommended in combination with the Alphatec®/Barrier 02-100 PE-underglove from Ansell or other suppliers (penetration time: 480 min).  
**For the permanent contact of a maximum of 15 minutes gloves made of the following materials are suitable:**  
Butyl rubber (minimum thickness: 0.7 mm; penetration time: 15 min)  
**As protection from splashes gloves made of the following materials are suitable:**  
Nitril (minimum thickness 0.12 mm), Disposable gloves with long cuffs  
After contact with the chemical preparation, take the disposable nitrile glove off immediately and put on a new disposable nitrile glove.
- Eye protection : Tightly fitting safety goggles or equipment with better protection
- Skin and body protection : Protective clothing
- Protective measures : Keep away from food, drink and animal feedingstuffs.  
Instantly remove any soiled and impregnated garments.  
Wash hands before breaks and immediately after handling the product.  
Avoid contact with the eyes and skin.
